

Exemplar Pathway:

Increased Renewables

This exemplar pathway is focused on a change in the future energy supply, in particular it increases the supply of renewables into the energy system. This example sets the supply levers to what is currently planned at the National policy level (level 2) with additional increase in renewable energy which is set at level 3. The following levers are increased in this exemplar pathway:

Onshore wind
Residential and commercial solar PV
Concentrated Solar Power
Centralised PV
Waste

The demand side levers remain unchanged as they are set at business as usual.
